Run the application. If the DBElephant SQLite Database Console application does not launch, make sure that the following paths exist: - Current Directories. - Application Data. - Program Files (x86). - Shared Data. You can then launch the application using the following command: dbelephant.exe Other Notes: Note: The application will not start if the "C:\Users\Username\AppData\Local\Temp" folder is full. Note: The application will not start if the application settings file can not be opened. If the DBElephant SQLite Database Console application is unable to connect to the database you will see the following error message in the console: "Open failed: unable to open database file" To resolve this problem, rename the settings file for the application. @Rosie2728Yes. You will need to change the DbElephant.ini file (located in the \ProgramData\dbelephant folder). An alternative solution is to make the \ProgramData\dbelephant folder an Active Directory group. With Active Directory the Application User is an Active Directory group, and is therefore protected from deletion. This makes it a bit safer if the application's data files and settings files are left on a network drive or on the Local PC If you do use Active Directory, you will need to change the Application user's password and put the user in a domain. Any suggestions on how to resolve this issue? 08/02/2017 New Version of DBElephant. It is an updated version of DBElephant. It has been updated to work with latest versions of SQLite from 5.x.x. 08/02/2017 Thanks to the other users who have reported this bug as it
